

TAKE CONTROL. SCALE. MANAGE.

Cloud Systems delivers intelligent, flexible control— powered by atmospherics®

atmospherics deploys rapidly, utilizing existing network infrastructures and installed hardware, reducing operating costs and increasing productivity.

atmospherics increases the effectiveness of installed IT infrastructure and collaborative spaces.

Cloud Systems presents the future of control and management over networks.

atmospherics projector screen | app™ transforms Cisco IP Phones into control points for projector screens. The app is available to both new and existing Unified Communications customers. Any addressable projector screens or lifts can be controlled either directly from the IP Phone or with the web interface from anywhere on the network.

There is no need to step out of your audience's focus to operate wall-mounted screen control boxes. At the touch of a button on the Cisco IP Phone conveniently within reach on the conference table, you can instantly lower the projector screen.

If you like the idea of maintaining your audience's attention as any room transforms to your meeting space, you may consider turning on the projector, routing content from a computer to the projector, turning down the lights and lowering the window shades. With an upgrade to atmospherics® 2.2, you can do all this and more through your Cisco IP Phone.

Cisco UC Requirements

Cisco Unified Communications Manager (CUCM) version 4.0 and above; IP Phones 7970, 7970G, 7971, 7971G-GE, 7975G; Cisco IP Communicator.

Projector Screens

Supports network addressable projector screen and lift control systems. Legacy systems with serial control interfaces will require serial to IP converters. Optional lighting and window shade control modules are available.

Server

Windows Server 2003 or later

Professional Presentations

atmospherics® projector screen |app transforms Cisco IP Phones into control points for both local and network-wide screen control. The app is available to both new and existing Unified Communications customers. Any addressable screen systems can be controlled either directly from the phone or over the web using simple automated administration policies.

Return on Investment

ROI results from meetings that start on time and keeping the audience focused on the presentation and not the set up. Presenters can confidently start a meeting using the apps with the IP Phone.

Improve Meeting Efficiency

Presenters will trust the technology to perform consistently and reliably for every meeting, and start meetings in the right frame of mind. No more frustration searching for control switches. At the conclusion of meetings, the screens can be automatically stowed to reduce the chances of damage and extend the asset life. Eliminate the fifteen-minute meeting set-up time and keep on message.

Take | Control™

The projector screen | app™ transforms compatible Cisco IP Phones into desktop control switches.

The projector screen | app can be configured to coordinate with projector control according to schedules, custom use cases or ad hoc use.

System Administrators can access every projector screen on the network over the web and centrally configure system and use profiles to properly stow idle screens to prevent damage.

Resellers

Cloud Systems sells through authorized Resellers and Systems Integrators. To become a Reseller please contact Cloud Systems today and learn more about both atmospherics and our atmospherics |apps.

SIP and ISPN

Both atmospherics® and atmospherics | apps are qualified for SIP and ISPN program benefits. Partners should register their opportunities at www.cisco.com/go/ISPN or www.cisco.com/go/SIP

CDN

atmospherics is registered in the CDN programs for Unified Communications, Converged Building Systems and Cisco EnergyWise

Licensing

Ordering the projector screen| app is as simple as calling your preferred Cisco Reseller Partner.

Take control.
