

atmos™ room control

TAKE CONTROL. SCALE. MANAGE.

Cloud Systems delivers intelligent, flexible control— powered by atmospherics®

atmospherics deploys rapidly utilizing existing network infrastructure and installed hardware, reducing operating costs and increasing productivity.

atmospherics increases the effectiveness of installed IT infrastructure and collaborative spaces.

Cloud Systems presents the future of control and management over networks.

atmospherics® 2.3

atmospherics empowers users to take control of any addressable device, anywhere on their network.

atmospherics also enables every device on the network to connect to one another, creates intelligent federations of devices, and administers dynamic policies to ensure all devices work in harmony to:

- minimize power consumption
- simplify control for end users
- increase workplace performance and productivity
- report status, use and maintenance needs
- track assets

atmospherics gives control to the people occupying a space. Shared and collaborative work environments can be transformed from one purpose to the next at the touch of a button.

atmospherics stores personalized control settings so they can be recalled each time the room changes occupants or purposes.

atmospherics provides unparalleled business productivity tools within your network.

Room | Control app for the Cisco Cius

Take control of any room on your network with your Cisco Cius.

Control all of your equipment with one device... from anywhere.

Personalized | Control

Use the three primary scenes, or create your own.

People are simply more productive in environments where they feel comfortable.

atmospherics® 2.3

No Custom Programming

Unlike traditional, hardware-based control systems, atmospherics is designed for ease of both administration and use. The software's form-based configuration tools eliminate the need for custom programming. You will be able to install and configure your system much more quickly and efficiently than ever before. And when devices on the network fail or reach end of life, replacements can be swapped out in minutes.

Scalability

Cloud Systems' software solution is installed on your networked server and therefore reaches to the very ends of your enterprise. As you extend control throughout your network, the system configuration and maintenance can be administered from one, central location. There are no per-room fixed costs, so the more rooms and methods of control you deploy, the more economical the solution becomes.

Standard User Interface

No matter the manufacturer of the hardware on your network, it can be controlled with a standard user interface.

atmospherics will greet users of video conferencing systems, lighting, HVAC, and more with a familiar interface for each function.

Ease of use is key to user adoption.

What do you want to control?

Licensing

Download atmos™ Room Control App from Cisco's App HQ™, or call your preferred Cisco Reseller Partner to take control today.
