PRESS RELEASE

Cloud Systems, Inc. announces the release of atmospherics® 2.3

Oakland, CA – July 30, 2010– Cloud Systems, Inc. announces its release of atmospherics 2.3, the next generation of IP-based control over enterprise networks. atmospherics 2.3 easily executes control of any networked infrastructure from any device with a web browser.

atmospherics 2.3 is the first version of atmospherics that allows Android, Mac, PC and other mobile-device developers to create custom graphical user interfaces and applications for unique control solutions. Cloud Systems is releasing an SDK utilizing standard RESTful webservice to select developers and partners through their Control Freaks Developer Network. atmospherics 2.3 also allows developers to create custom real-time reporting and ROI dashboards using open-architecture business intelligence tools.

atmospherics 2.3 enables, single-button transformation of shared environments such as collaborative workspace, healthcare facilities, hotel rooms, conference rooms, classrooms and briefing centers. From one-touch video conferencing to enterprise-wide energy conservation policies, atmospherics gives the end user ultimate control. Standards-based modeling enables administrators to control, manage and report on networked devices without the need for custom programming. Simple and intuitive user interfaces help drive user adoption. Network scalability ensures atmospherics has the lowest cost of ownership and the greatest level of functionality and flexibility among control systems.

atmospherics 2.3 is available exclusively through Cloud Systems Reseller Partners. Contact Cloud Systems directly to apply to become a member of the Control Freaks Developer Network.

About Cloud Systems, Inc.:

Headquartered in Oakland, California, Cloud Systems' has been delivering intelligent and flexible control powered by atmospherics® since 2000. The Company's products and services are deployed in multiple industry verticals including: Professional Services; Healthcare; Education; Government; Hospitality; Energy; Financial Services; Entertainment; Digital Signage. Cloud Systems' flagship product, atmospherics, enables control of any addressable device from anywhere on the network. Unlike traditional hardware control systems, there is no custom programming required. atmospherics allows installers to integrate audio visual systems, multimedia sources, IP telephony, security access, and building control assets anywhere on the network.

For additional information contact Cloud Systems, Inc. 7220 Edgewater Drive, Oakland, CA 94621 or go to our website: www.cloudsystems.com
